

Install R on Windows

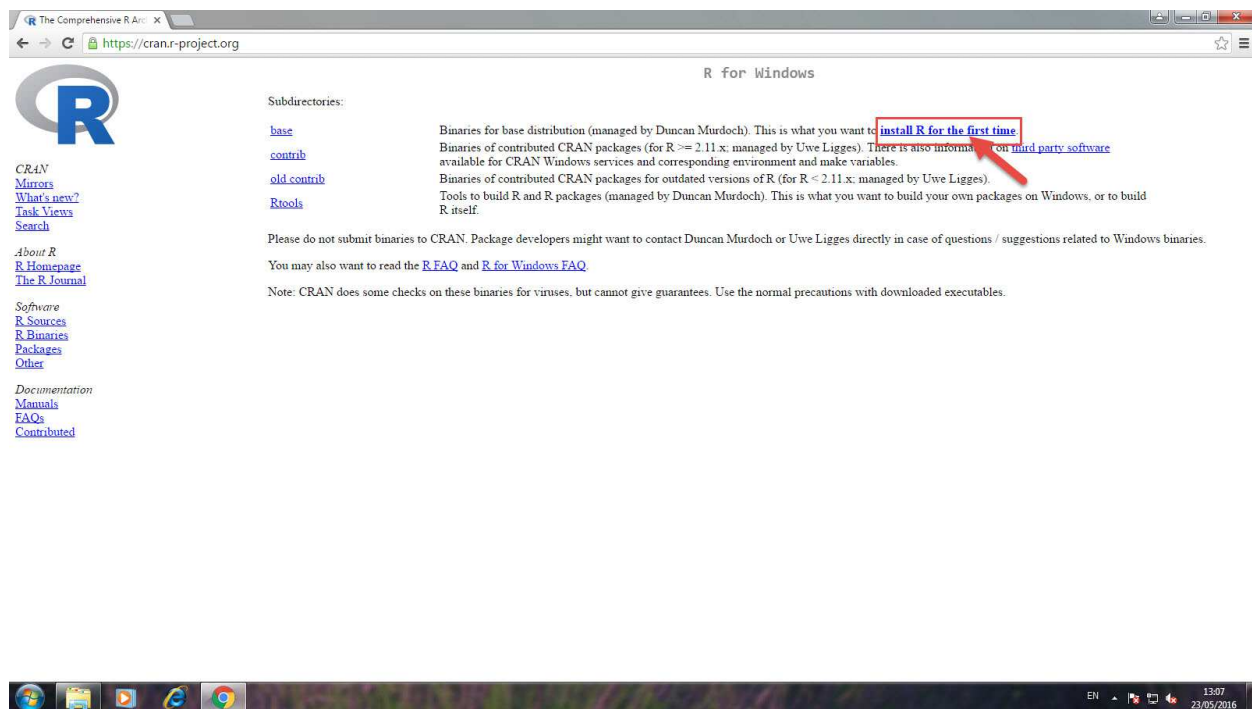

Go to Comprehensive R Archive Network (CRAN) website <https://cran.r-project.org/>

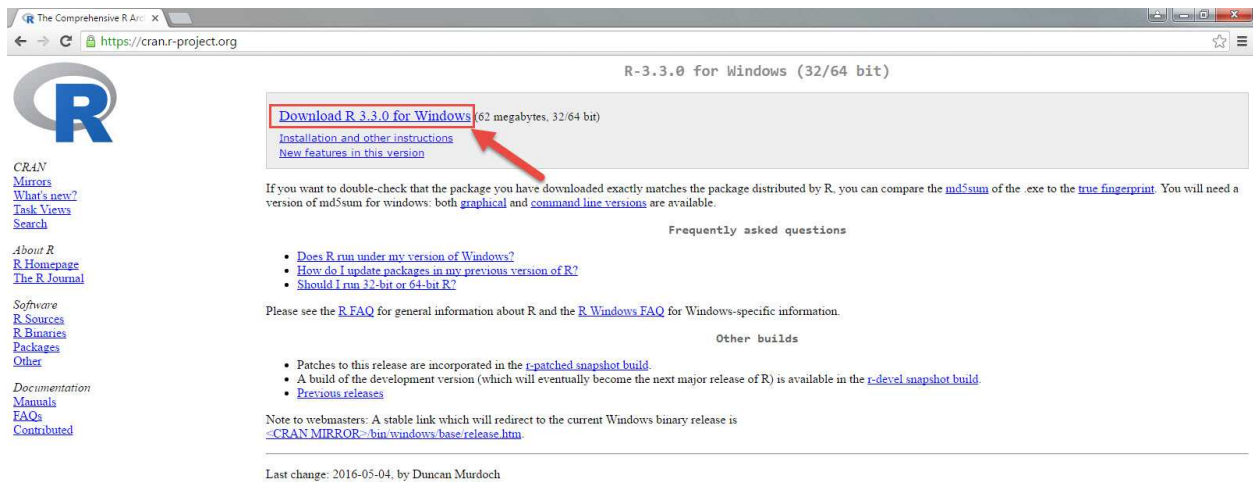

Select the link based on your operating system

Click on the link install R for the first time

Click on the link Download R for Windows (Here the version is R 3.3.0, it may be latest version while installing)

After installation completed click on Run Button

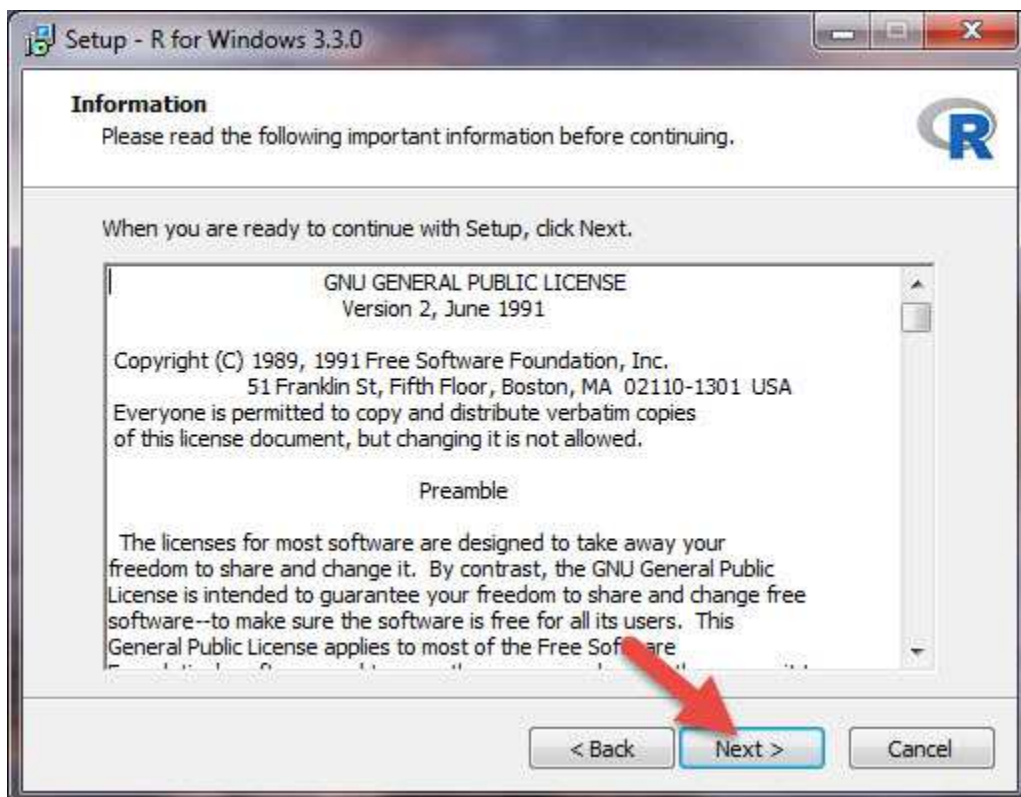

Select the language you want to prefer

Click on Next Button

Read GNU General Public Licence Agreement and accept it by click on Next Button

Change the location if you want to install R on different folder or Leave as it is if you prefer same location

Select the components either 32 bit or 64 bit or both based on your operating system

You can customize the start up by selecting yes radio button (by default it is no)

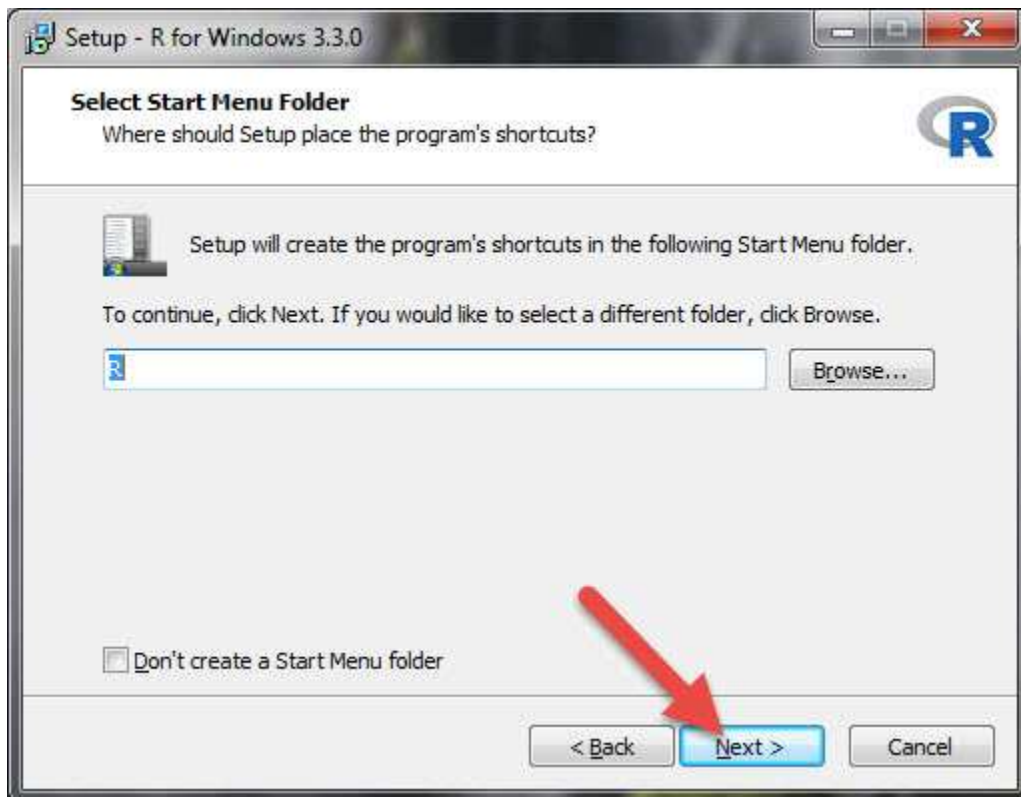

Select either MDI((multiple child windows in one big window) or SDI(separate windows)

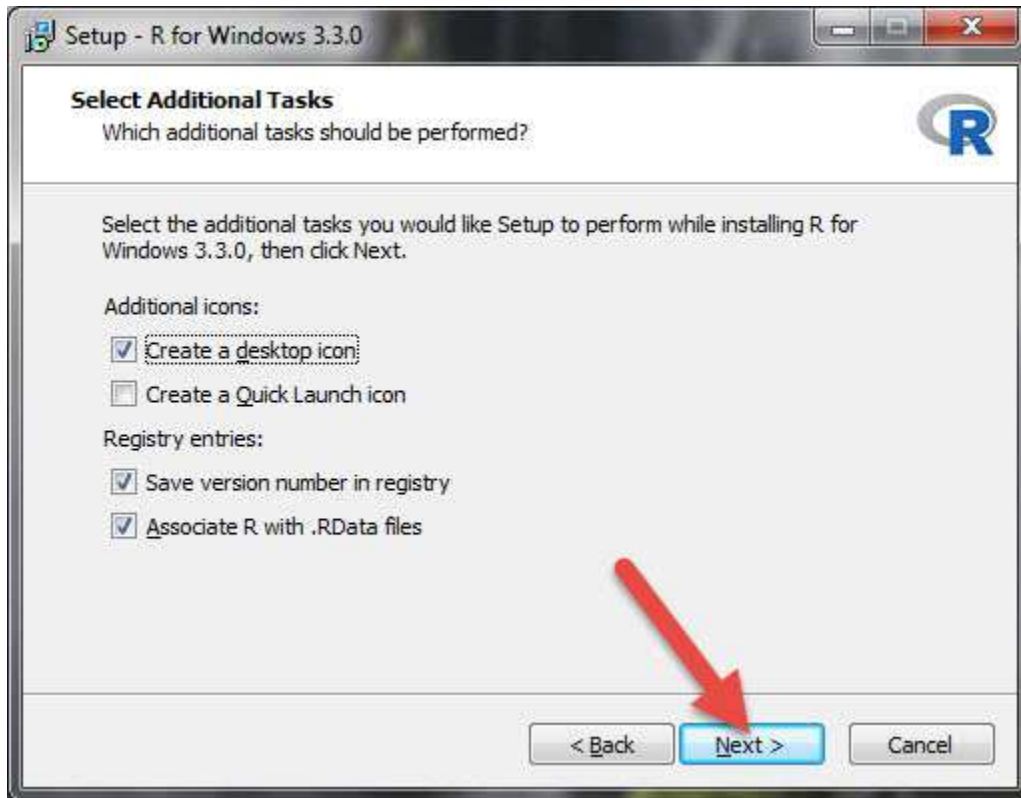

Select Help style as either HTML help or plain text. Html help would be more preferable

Select the start menu folder to setup program's shortcut. Leave as it is if you don't prefer other folder

Select Additional tasks like icons or registry entries or leave it as default options

Wait for installation to complete

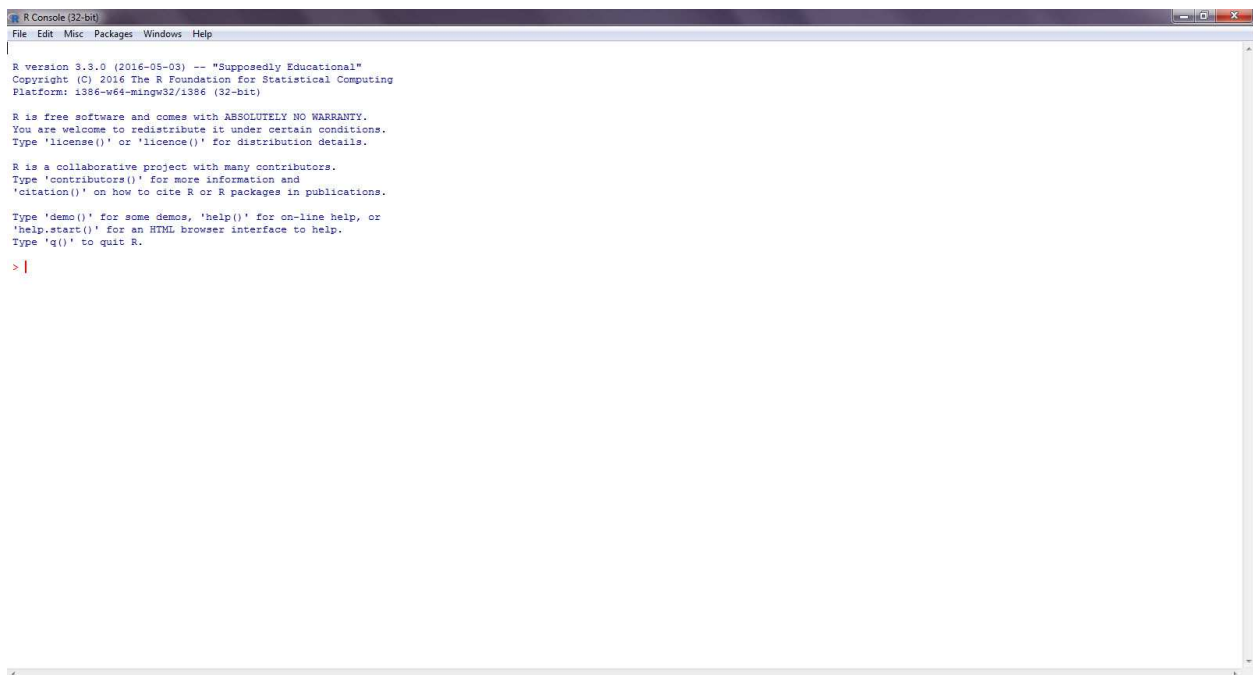

Click on Finish Button to complete the installation process

Finally R will be displayed as Desktop shortcut icon and/or start menu item

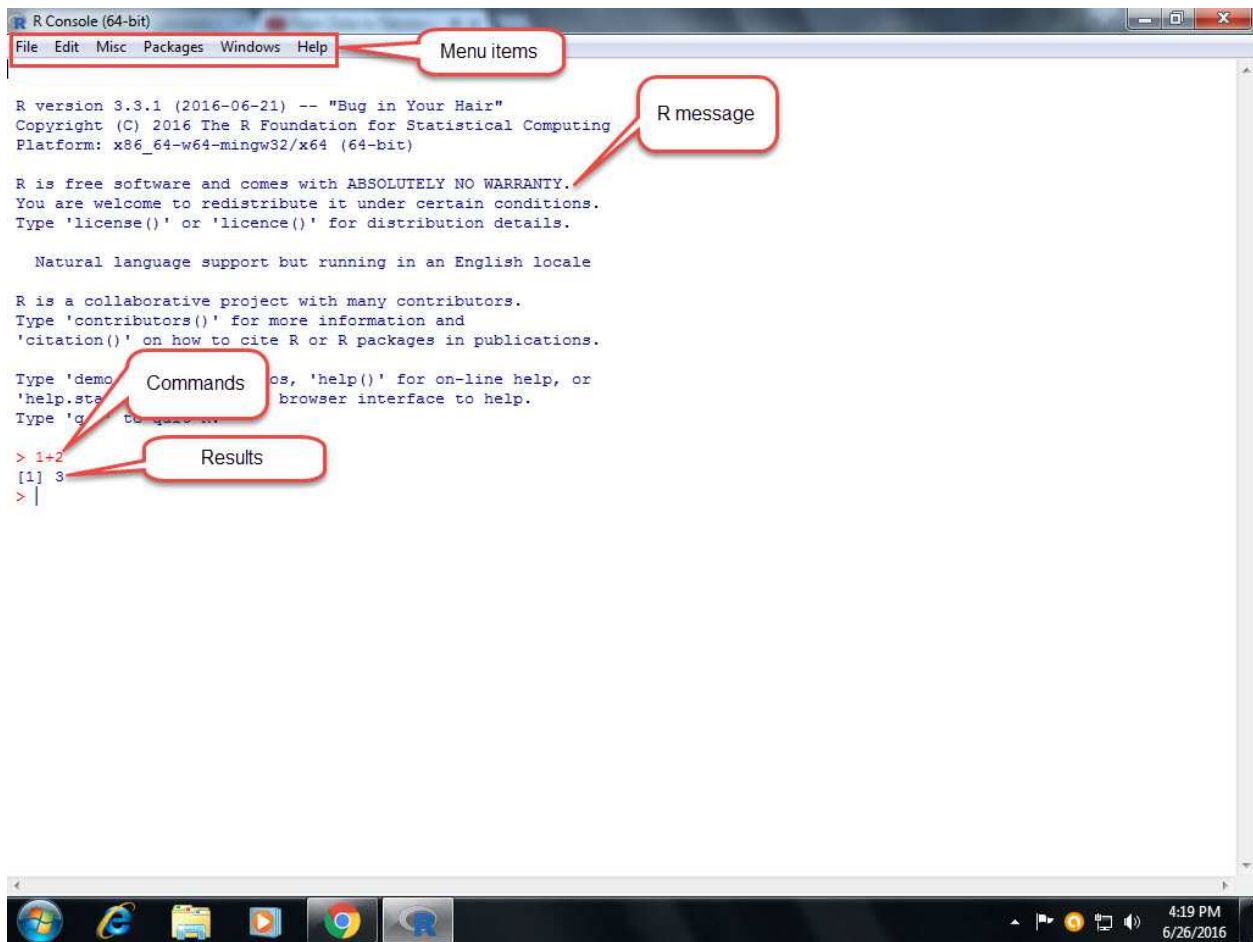

Once click on the shortcut icon/menu item, you will get a R console window

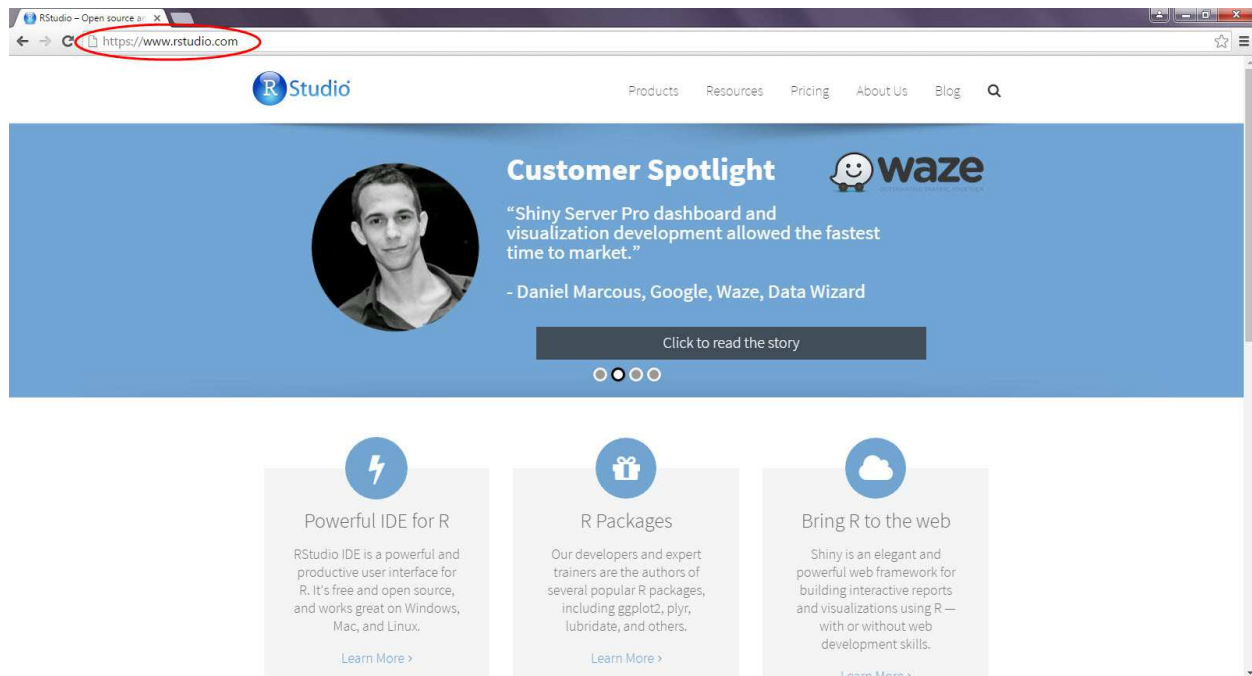

Write any commands after the greater than symbol (>) where the cursor is blinking

Layout of R-Console

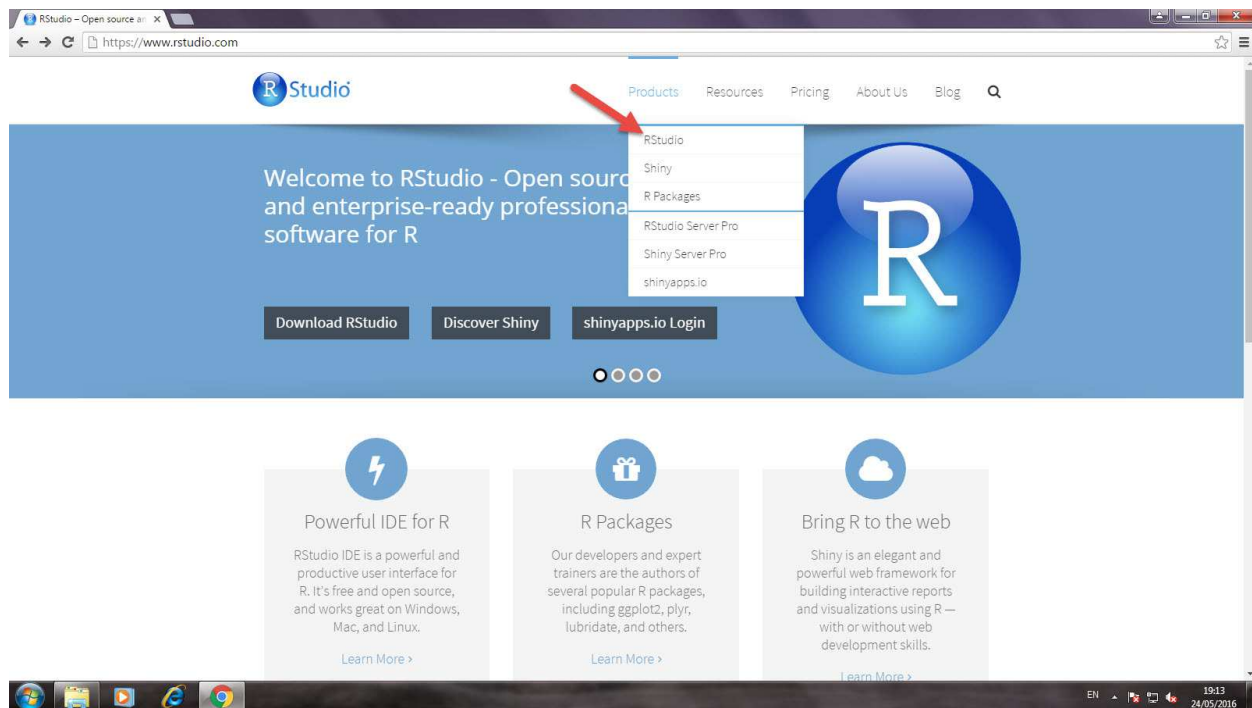

Install R-Studio IDE for Windows

Goto R-Studio website <https://www.rstudio.com/>

Click on Products menu

There are two types of versions available 1) Desktop(standalone) 2) server(browser based interface to Run R on a remote Linux server for Centralized accessing and computation)

In this example Download R Studio desktop version has been chosen for windows operating system

The screenshot shows the RStudio website at <https://www.rstudio.com/products/rstudio/>. The main heading is "Take control of your R code". Below this, there is a video player showing the RStudio logo and a button that says "CLICK HERE TO SEE ADDITIONAL FEATURES".

There are two main options: Desktop and Server. The Desktop option is highlighted with a red arrow. It says "Run RStudio on your desktop" and "RStudio Desktop". The Server option says "Centralize access and computation" and "RStudio Server".

Below the Desktop option, there is a table comparing the Open Source Edition and the Commercial License.

	Open Source Edition	Commercial License
Overview	<ul style="list-style-type: none">• Access RStudio locally• Syntax highlighting, code completion, and smart indentation• Execute R code directly from the source editor• Quickly jump to function definitions• Easily manage multiple working directories using projects• Integrated R help and documentation• Interactive debugger to diagnose and fix errors quickly• Extensive package development tools	<p>All of the features of open source; plus:</p> <ul style="list-style-type: none">• A commercial license for organizations not able to use AGPL software• Access to priority support
Support	Community forums only	<ul style="list-style-type: none">• Priority Email Support• 8 hour response during business hours (ET)
License	AGPL v3	RStudio License Agreement
Pricing	Free	\$995/year

At the bottom of the table, there are two buttons: "DOWNLOAD RSTUDIO DESKTOP" and "BUY NOW". A red arrow points to the "DOWNLOAD RSTUDIO DESKTOP" button.

Below the table, there is a section for "RStudio Server".

Choose either single installer file, or archived zip folder based on the operating system of the machine

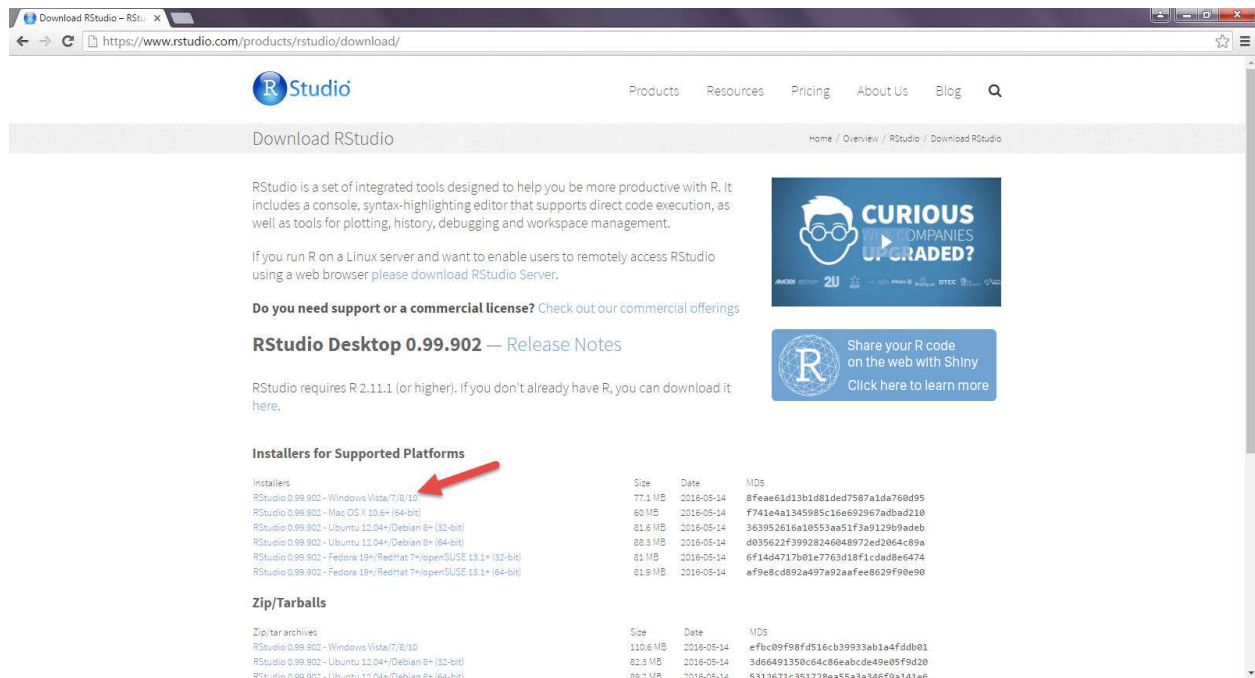

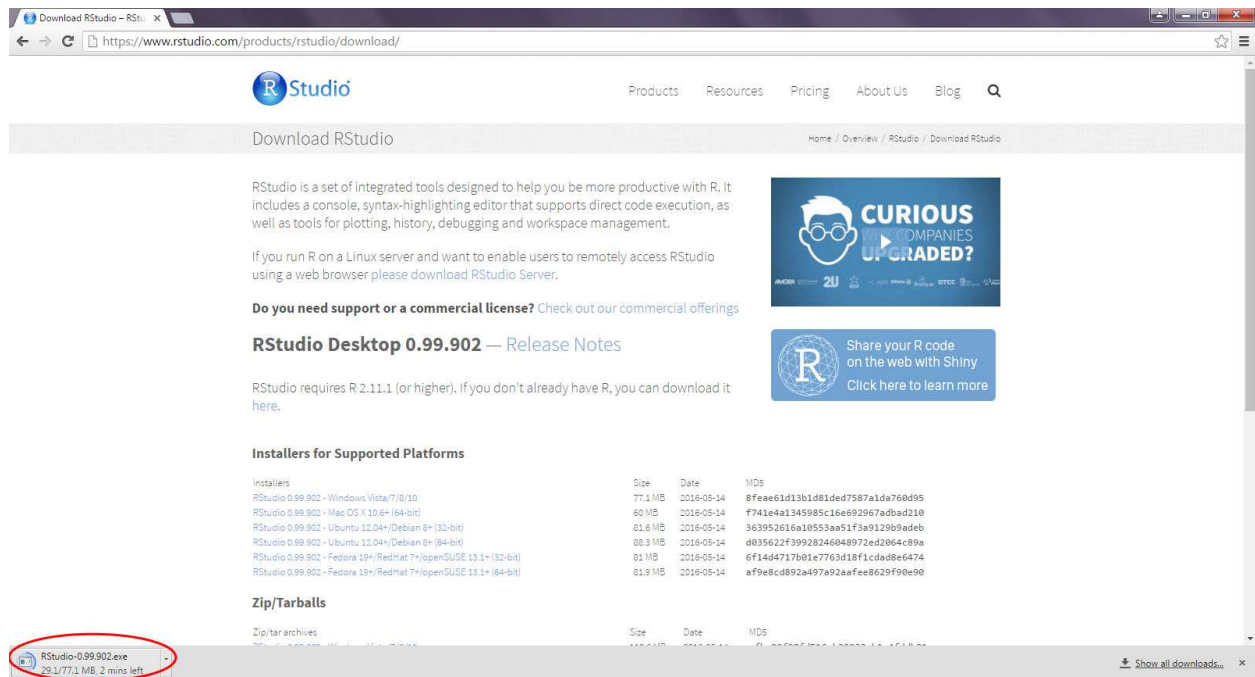

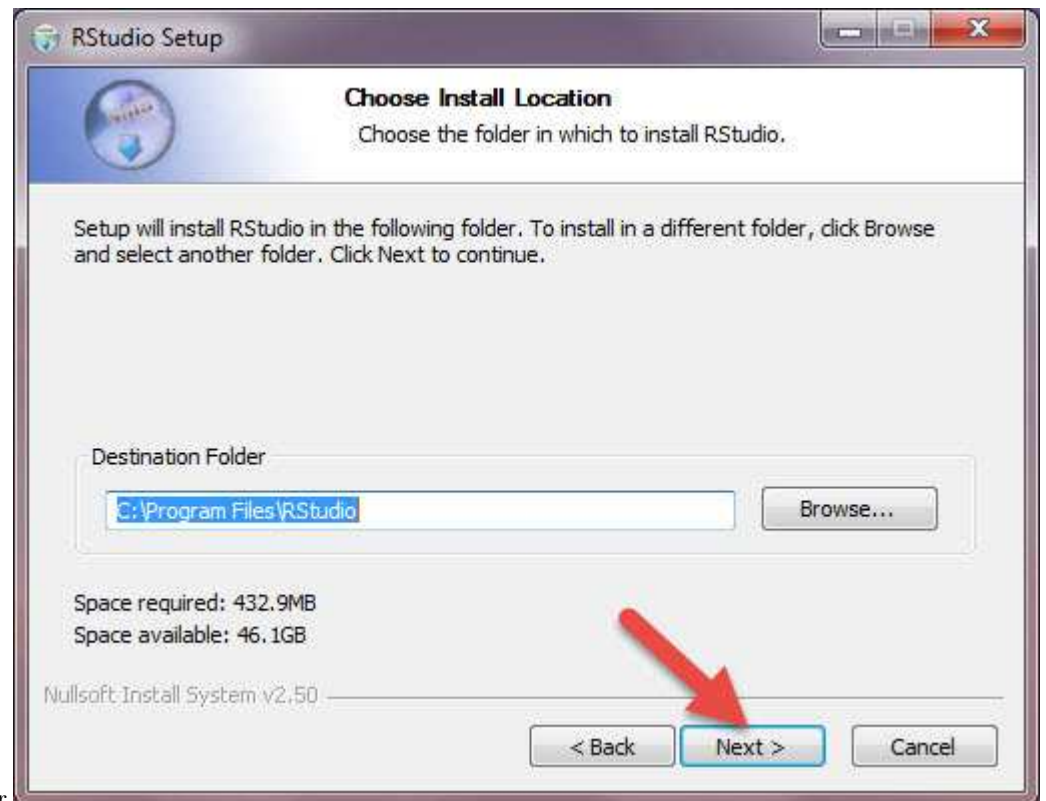

Figure 1: optional caption text

After the complete installation,click on the installed file and choose Run Button

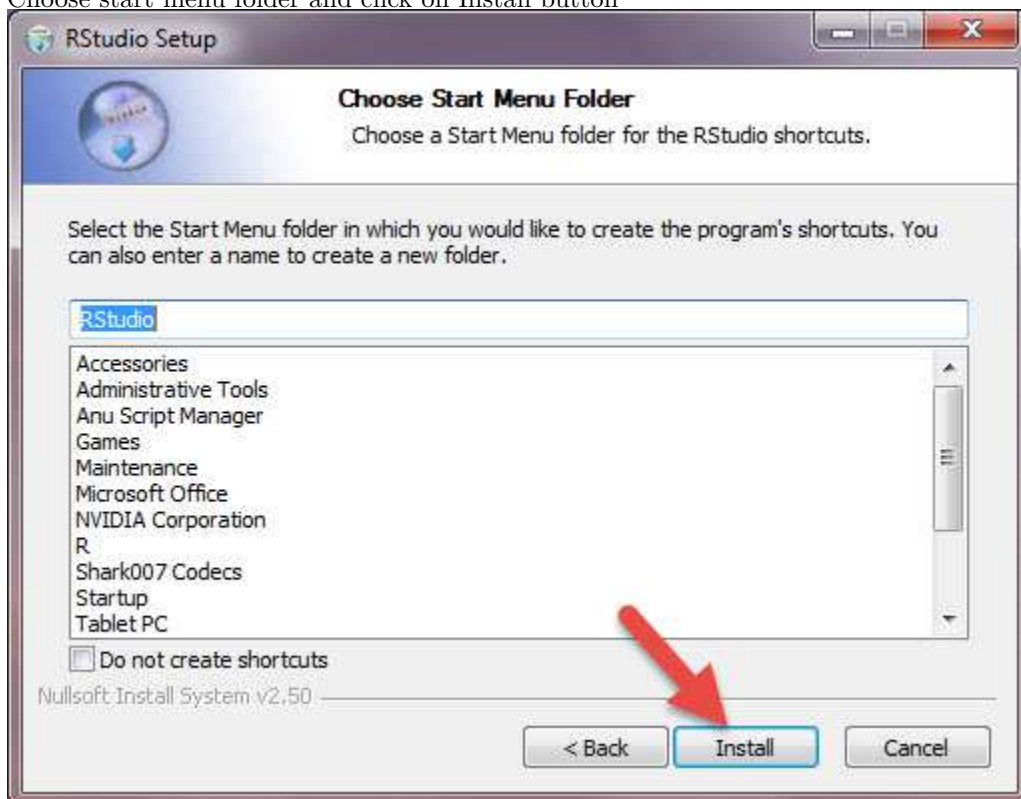

Click on Next Button

Choose the destination folder

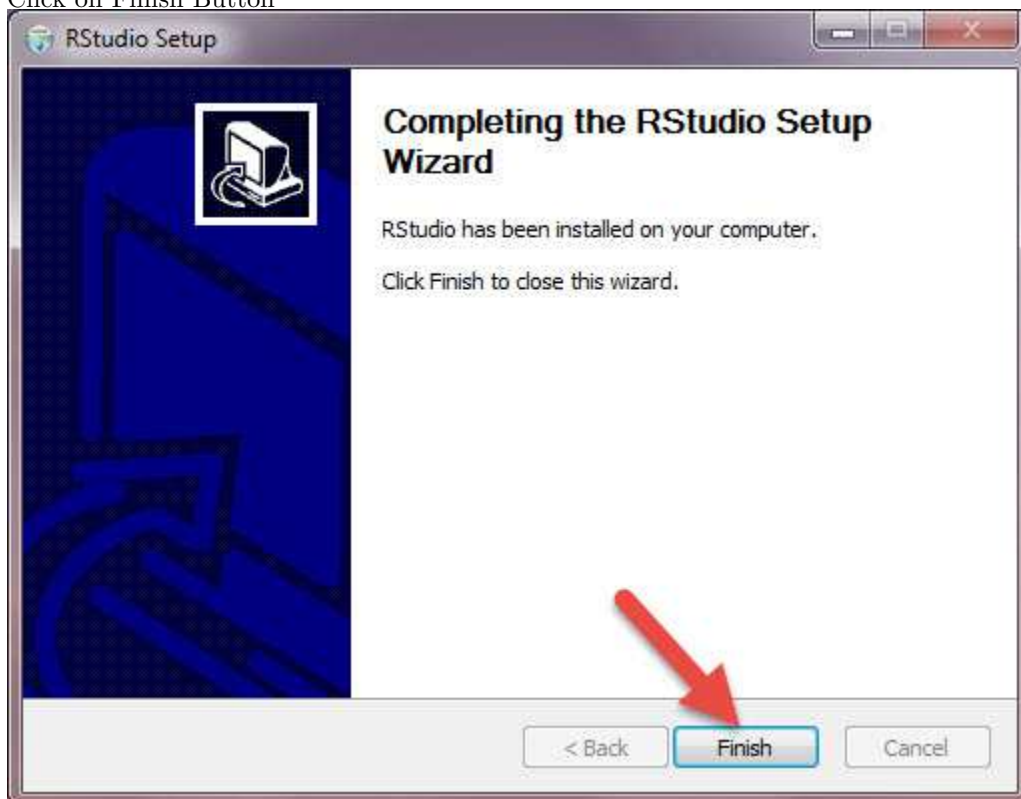

Choose start menu folder and click on Install button

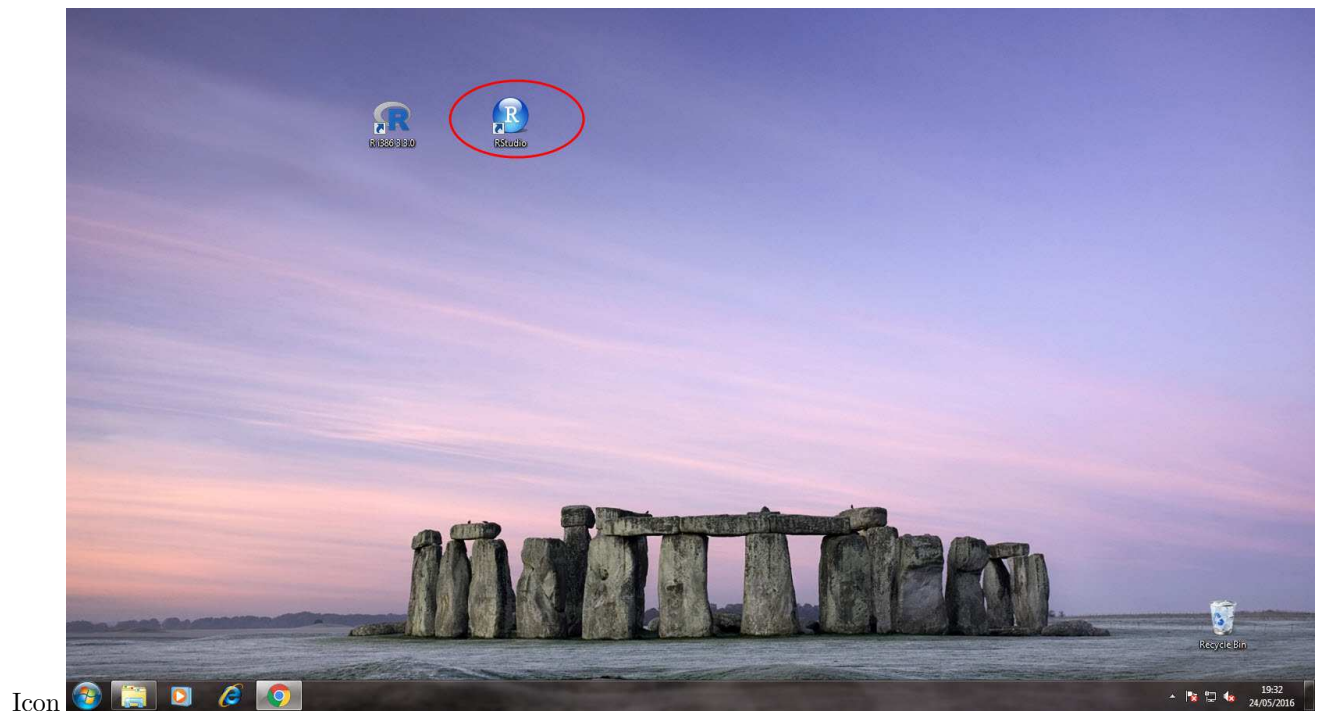

Wait until installation completed

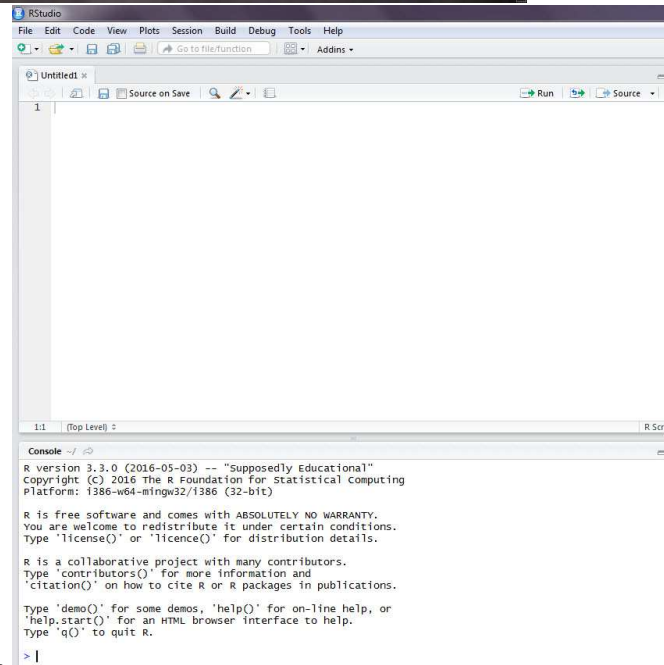

Click on Finish Button

Check the desktop

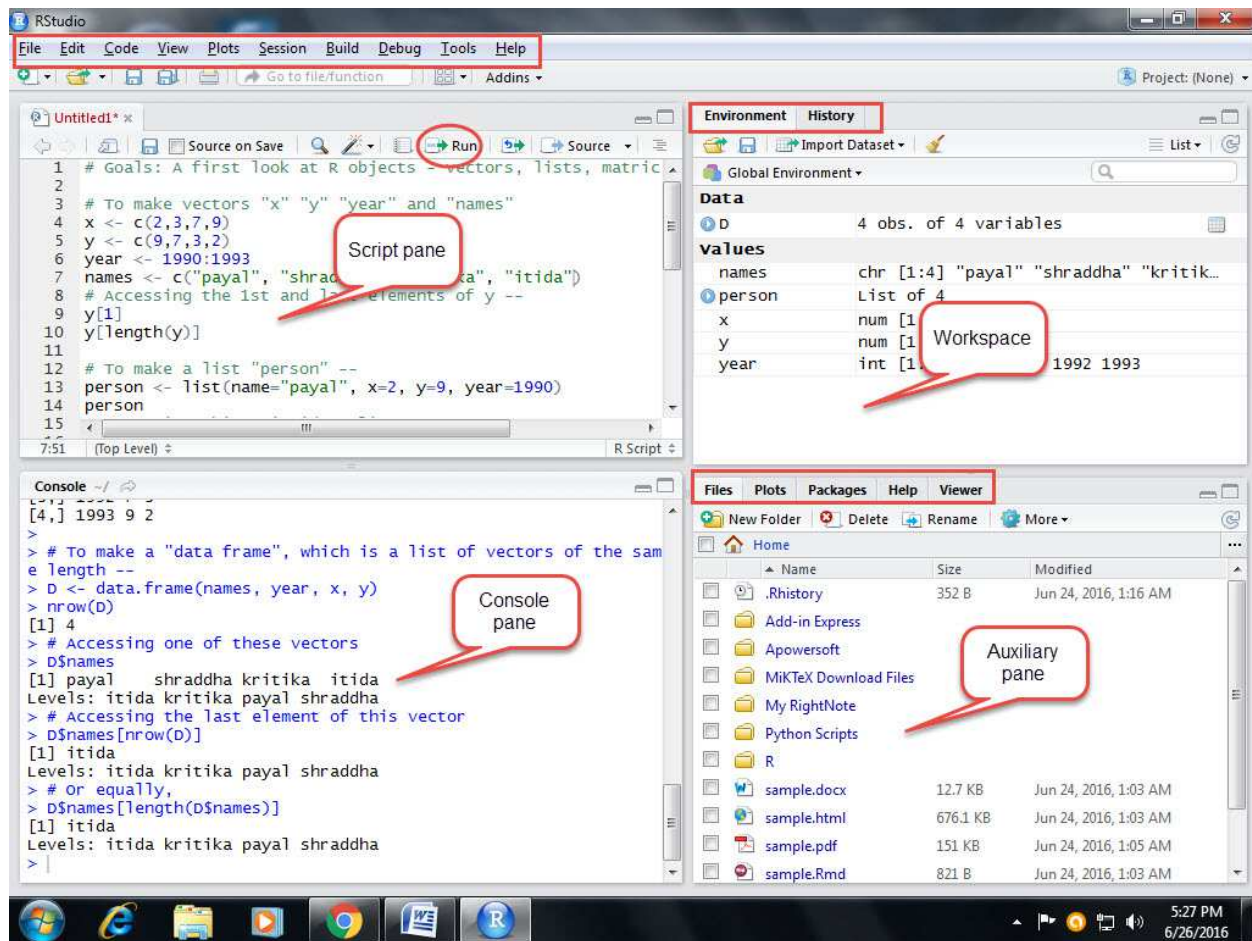

Icon

Once click on desktop shortcut icon, the R-Studio window will be open

Layout of R-Studio

Basic Structure of R

explanation

Syntax

- R programming is case sensitive, which means for example a letter 'm' is not equal to 'M'
- Comments can be written by using # at the beginning of the statement
- We can Run single/multiple lines of code. This is much more flexible because of it's interpreted nature
- Script files are saved with .R extension, workspace saved with .RData, code history saved with .Rhistory
- R has two assignment operators which can assign values into objects. less than symbol followed by the hyphen (<-) or Equal operator (=)
